The marking effect of ABO and Rh blood types were investigated at pathologies and in a norm among the men and women in age from 17 to 65 years, resident in territory of the Crimea. The marking effect for men and women coincided in regard to head pains and differentiated in regard to eye pathologies and consumption of alcohol. The blood types were found to mark allergic and cardio-vascular diseases and gastro-enteric pathologies in women.

**Keywords:** blood of A<sub>v</sub>0 types, rhesus-factor, pathology, genetic markers.
